

# Safety Brief

## Flammable Storage Cabinets: Think Before You Store.

Flammable storage cabinets are essential for laboratory and shop safety, designed to protect flammable liquids from external fire sources. Properly storing only the appropriate materials, within regulated quantities, is key to a safe working environment. For more information, contact EHS.

## Allowable Items to Store:

### Flammable Liquids

- Includes oil-based paints, lacquers, acetone, toluene, and similar materials.

### Aerosol Products

- Includes spray paints, WD-40, aerosol lubricants

### Flammable Solvents and Chemicals

- Includes cleaning solvents, degreasers, and chemical cleaners

## Prohibited Items to Store:

### Non-Flammable Paints

- Includes acrylic and water-based paints

### Corrosive Materials

- Includes hydrochloric acid, sulfuric acid, and sodium hydroxide

### Compressed Gas Cylinders

- Gas cylinders (even flammables) should be stored in separate, properly ventilated areas
