

Compressed Gas Cylinders

Compressed gas cylinders can be very useful in numerous ways, but improperly storing them can lead to very serious hazards. Severe injuries and property damage can occur if not handled correctly.

Here are some tips on how to properly store these cylinders. →

Safety Tips

- Always store upright with caps over the valves.
- Cylinders should always be properly secured at all times to prevent falling or rolling.
- Do not store incompatible gas cylinders (flammables/oxidizers).
- Store cylinders in cool, dry, and well-ventilated areas to prevent inhalation hazards.
- Do not store in direct sunlight or high temperatures.
- Remove empty cylinders to avoid confusion with full ones.
